Philips light bulb colour change

The invention of the lamp has changed the way people live in many ways; the most remarkable way was by giving employers the means to work employees after dark. The invention of the lamp also allows more people freedom to come and go safely after dark. Before commercially viable lamps, it was unusual for residential homes to have electricity. After the lamp was introduced, people signed up for electricity to be sent to their homes. In the 1930s, 10% of people living in rural and remote areas had electricity in their homes. In the 1960s, most people had electricity. With brighter lights to illuminate their surroundings, people began to read more, learning facilities held classes after dark, and there was a steady increase in higher education enrolments among the general population. This spurred the advancement of technology. In the years since the lamp was invented, there have been more technological advances than in any other historical period. Merchandise production increased because factory and factory employees could work overnight. It also meant that people had more money than ever before, which boosted the economy. The population of the cities around factories and power plants grew as people moved to find work, or to find cities where they could open their own businesses. It wasn't long ago that Philips introduced its Hue smart lighting system, and since then, the company has expanded its lineup to include a good arrangement of lamps and fixtures to choose from.

However, it can be a bit confusing when buying Philips Hue lights to add to your home as there are a ton of different bulbs available. Here's a summary of what everything Hue has to offer. RELATED: How to set up your Philips Lamps and Luminaires tint lights There are many more lamps and lights than you would expect, each designed for a different use. Here's what you'll find in the Philips Hue light line. Hue White and Color This is undoubtedly the most popular Philips Hue lamp available, and is the same lamp that is included in the Hue White and Color Starter Kit, which is a great kit to buy if you're just starting out with Philips Hue. The Hue White and Color Bulb (\$60) can display different colors, but its true strength is the ability to display white temperatures. You could put it in a bright white light that simulates the morning sun, to wake up, and a warm, soft, almost reddish light for the night to help you sleep. If that's worth \$60 per light bulb, it's up to you—our team is a little divided on the subject. Hue White The Hue White lamp is a much cheaper alternative to the Hue White and Color lamp, priced at just \$15 per lamp instead of \$60. You can't change the or even the temperature of white, although you can darken it like any other Hue lamp. It also features a slightly more traditional shape, to... some reason. However, the Hue White Starter Kit is a \$120 whole cheaper than the Hue Hue and Color Starter Kit, making it a great option for frugal buyers as well as those who don't really need the fancy colors. Hue White Ambiance This is philips' latest Hue lamp, which after much expectation is finally available for purchase. The Hue White Environment is between the Hue White and Color lamp and the Hue White lamp. It does not allow you to switch to different colors, but changes temperatures from a warm soft white to a bright daylight. Its price is also comfortably in the middle, at \$30. You can also buy a starter kit with Ambiance lamps, which contains a Hue Bridge, two Hue White Ambiance lamps and a Hue Dimmer Switch. Hue Lux The Hue Lux lamp is an older lamp that has been officially discontinued. The Hue Lux is essentially the same as the latest hue white lamp, albeit with a slightly different shape and a slightly smaller light output. (Some people have noticed that they seem to put out less heat, too.) If you're in the market for a Hue lamp that only makes white soft, there's almost no reason to get a Hue Lux bulb instead of the newer Hue White, unless you can find it for cheaper. The Lux lamp will still work with the newer Philips Hue bridge, so if you already have Lux bulbs, you can still use them with a newer configuration without problems. Hue White and Color PAR16 The \$60 Philips Hue PAR16 lamp is a standout lamp, so it should be used in luminaires that provide directional lighting, unlike regular lamps or ceiling lamps. Being a directional lamp, it is much weaker than the other Hue lamps, putting out only about 300 lumens, while the hue white and normal color lamp can erase 800 lumens. Hue White and Color BR30 If you have ceiling lighting in your home, then the \$60 Hue BR30 lamp is the one that is intended for this type of fixtures. As you can see in the photo, the BR30 is a much larger lamp than the other Philips hue lights, making it great for flood lighting. These lamps can still be used in other luminaires, but it is better to stick with the smaller bulbs, since the BR30 probably will not fit in traditional lamps and other luminaires. Hue LightStrip Plus RELATED: What is bias lighting and why you should use it While not necessarily a light bulb, the \$90 Hue LightStrip Plus lights are flattened string lights with an adhesive support that can stick to just about anything. The kit comes with a 1.80 m light strip, although you can buy extensions and make it up to 33 feet. I currently use lightstrip plus behind my TV as bias lighting, but you can put the light strip anywhere: under your kitchen cabinets or even under your bed for a cold late night glow. Hue Go If you want a portable light source that is powered by the battery, but still control it from your phone, so the \$90 Hue Go is your best bet. It gives you up to three hours of battery life and it's great for putting light where you normally wouldn't be able to put one Fixture. Maybe there isn't a socket nearby, or maybe a light bulb wouldn't fit there. Hue Go is very versatile in this regard. It only puts out about 300 lumens, but is bright enough to shed some pure ambient light. Hue Iris The \$100 Iris is primarily intended to shed light on a wall to create a kind of cool environment. It is also a larger luminaire that is not necessarily elegant (cheap clean plastic is not really attractive), so it is not made to be put on display necessarily, but rather behind a chair or other object. The Iris only puts out about 200 lumens, but that's enough to put a decent glow on a wall, especially in a weaker environment, and the farther you have the Iris from the wall, the wider the cast gets. Hue Bloom The \$60 Bloom is similar to Iris, but is much smaller and a bit more beautiful, so it's better to put on a final table or other surface where it can be seen. However, the Bloom is still intended to cast light on a wall as ambient light. It's not as bright as Iris, since the Bloom only pushes out 120 lumens, but its compact size becomes a better choice if you're suffering from space. Hue Beyond If you are looking for a Philips Hue all-in-one lighting system (as in, the lamps and the luminaire itself), then the Hue Beyond is one to check. The In addition comes in three different configurations: a desk lamp, pendant and a ceiling lamp. It also includes two lights that can be controlled independently, allowing the light to emit two different colors if you want. The downside is that the Beyond is expensive. Too expensive. The table lamp alone costs \$399 and this is the cheapest in the set, while the others cost \$649. Hue Phoenix Similar to Beyond, the Hue Phoenix is an all-in-one hue lamp that comes with light and the light fixture. However, the biggest difference is that light can not change color, but only the color temperature, similar to the Hue White Ambiance lamp mentioned above. The Phoenix also comes in different styles, including a desk lamp (\$249), a lowered ceiling light (\$49), a herd (\$199), a \$449 pendant and a ceiling accessory (\$449). Philips Hue Accessories Philips also offers some lightweight products to enhance the experience – particularly two switches that help you turn the lights on and off. Hue Touch \$60 Tone is a physical switch that lets you change your hue lights to different scenes without having to do it from your phone. Tap includes four buttons, which allow you to control and switch to four different scenes with just the push of a button. Interestingly, the Tap does not require batteries or recharge, it stores energy from the push of buttons to feed, which is very cool. However, some found the buttons and difficult to press. The latest accessory for the Hue Dimmer Switch Philips is the Hue Dimmer Switch, which is a simple battery-powered light switch that comes with power on/off as well as brightness controls to dim or illuminate your lights. It looks and feels like a regular light switch, and sticks to the wall so there is no wiring experience required to set it up. It's only \$24, making it easy if you use Philips Hue lights and want an easier way to turn the lights on and off. Also, you can do a lot more with the Dimmer Switch if you have the right app.
